JavaEE, Hibernate, JPA, Spring boot, Spring Security, Spring MVC, JSP, Servlet, Maven

PUBLICATIONS
ASBIRES - 2018

There are sixty seven employees are working on MIT outsourcing project. So they cannot book transport services using Virtusa transport booking system. Because of that, they don't have an access to the Virtusa transport system from the MIT premises. Since they use manual system to overcome this obstacle, every employee has to send an email daily, to book their transport service and all the sixty seven emails handle by one person who is working on Virtusa. As the final process, request time and destination are added to the excel sheet one by one to send transport service company This transport booking System is a mobile application that allows employee book shuttle services, booking shuttle time and the destination online. This system is established for all the office users after gaining access from the administrator. Shuttle Service System provides car and van transportation system, a facility to put request and amend request which need an instant and quick requesting. This system can be used by the users in performing online requesting via internet for their transport booking. Users can use this application directly on their mobile phone.
